

Tape Measures

Steel and fibreglass tapes are available in three convenient lengths

30m, 50m and 100m

Open reel construction for easy cleaning

Superior accuracy and durability

High impact ABS plastic frame

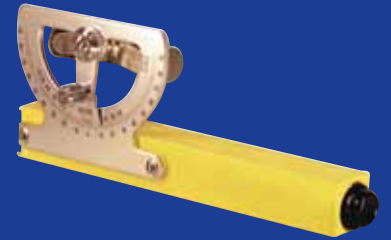

Staff Bubble

The staff bubble is used to determine the verticality of a leveling staff

Heavy duty frame is made of a strong aluminium die casting

Accuracy of circular bubble is 10 minutes

Abney Level

The Abney level is used to find angle and slope of any terrain

The Vertical scale is graduated 0 to 90 degrees in both directions with a vernier scale accurate to 10 minutes

Percent of grade scale from 0% to 100%

Impact resistant body

Slope Meter

Slope meters are used to accurately determine the slope of ground for grading purposes

The Slope Meter enables the operator to construct true slopes without waves

Two models to choose from

Optical Square

An optical square is a precise instrument used to determine a right angle point or rectilinear point between two or three targets at the same time. It uses precision pentagonal prisms accurate to +/- 5minutes

Hand Level

5 inch sighting tube, used in running simple levels

Ideal for preliminary survey

Sturdy impact resistant body and easy to read bubble

Plumb Bob

Precision machined for perfect balance and lacquered for a lasting finish

Includes a hardened steel point

Various sizes available
